Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from An Inaugural Dissertation, Containing Some Observations on the Pelvis of the Mammalia, Which, Under the Presidency of Autenreith, Professor of Anatomy and Surgery, Was Offered for Public Examination by John Fischer: A Candidate for the Degree of Doctor of Medicine Tubingen, September, 1798 This is the reason chiefly why the larger os ilium of the mammalia is so much narrower than the same bone in man, and its crest especially narrow. Hence the greatest distinction arises in the ratio of the muscles of the pelvis and trunk; for instance, the dorsal muscles are very large in the rabbit, and the quadratus lumborum and psoas muscles of that animal which lie anteriorly on the longest transverse processes. These muscles, on both sides, completely hide the anterior aspect of the bodies of the lumbar vertebrae. There is no iliacus muscle, as there is evidently no room for it; but the quadratus lumborum being left on the lateral and superior margin of the pelvis, it ascends above that, resting almost on the anterior and lateral margin of the sacrum; posteriorly it appears to be joined in a manner to the pyriformus muscle of the true pelvis. The abdominal muscles are inserted into the anterior elongated margin of the ilium, Pouparts ligaments being placed more at the side than in man, on account of the very broad symphysis of the bones of the pubes and thigh bones coming out from the sides of the pelvis, and placed chiefly in an oblique position. On account of the narrowness of the ilium, these ligaments almost touched the inferior insertion of the quadratus lumborum, unless the psoas muscle came between them. All...
