Networked distributed computing (NDC) systems are driving an ongoing technological revolution that has already pawnd the Internet, and will soon transform the world into one ubiquitous, pervasive "information field." In "Network Distributed Computing: Fitscapes and Fallacies", Max K. Goff reviews the field's crucial challenges, state-of-the-art solutions, and breathtaking future. Goff covers both the "trees" and the "forest" - showing how NDC has evolved, where it's headed, and above all, what it all means. The features also include: building NDC "fitscapes" - new frameworks that turbocharge innovation; leveraging Moore's Law, Gilder's Law, Metcalfe's Law, and the latest R and D advances; overcoming the eight classic fallacies of distributed computing; enhancing collaboration, security, and dependability in networked computing environments; integrating wired and wireless networks - key software challenges; messaging and communications protocols for distributed, interoperable systems; the roles of XML, Web services, Spaces, Jini, and other key technologies; and NDC-driven megatrends - Semantic Web, global transparency, nanotech, robotics, and beyond. 280 pp. Englisch.
